

## How to Use the Data Map

The interactive map shows parcels in the Preliminary Investigation Area (PIA) and the status of the parcels as DTSC oversees cleanup.

To better manage outreach, DTSC has divided the PIA into seven outreach zones. Each zone has a dedicated Public Participation Specialist assigned to assist owners and residents with questions. Outlines show the outreach areas. The colors on these outlines do not reflect levels of contamination.

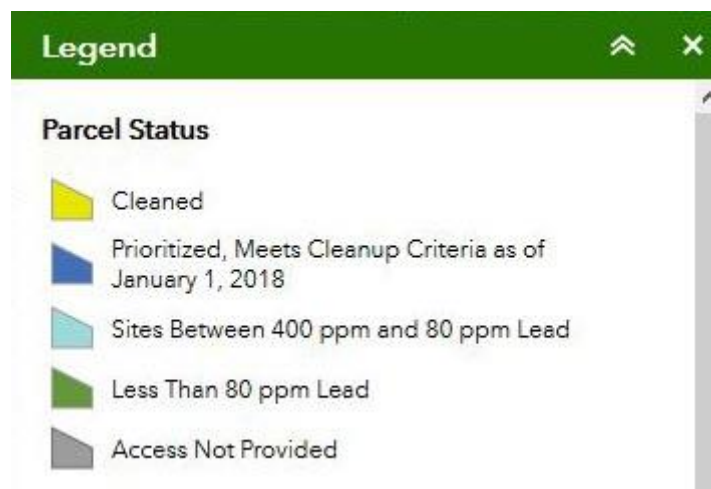

You can search for an address or Assessor's Parcel Number (APN) by using the search box located in the upper left. Use abbreviations for Street and Avenue, as well as compass directions, but do not use periods. For example, 12345 S Investigation St will take you to that address, but 12345 S. Investigation St. will not.

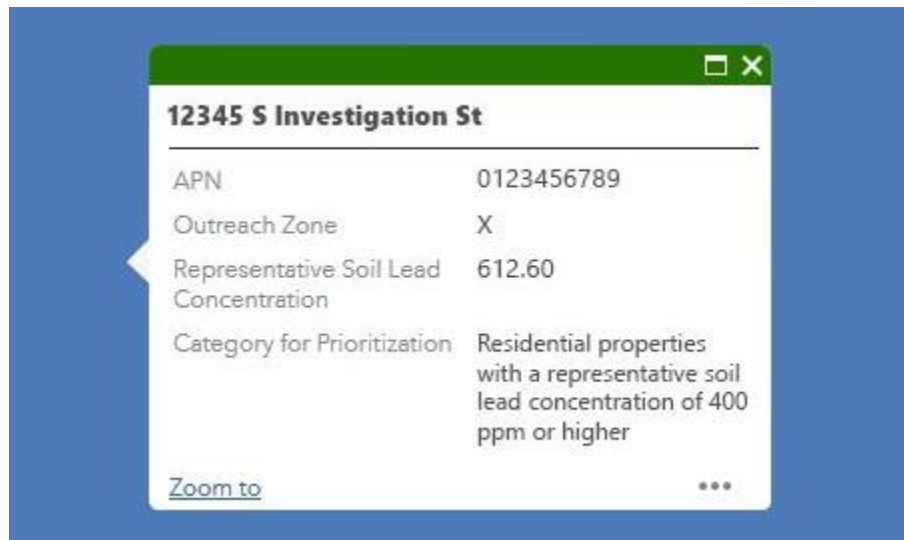

Use the **Plus (+)** button found in the top left to enlarge areas of the map.

Parcels on the map are color coded as follows:

By clicking on each parcel for more details, you will find the primary APN, Outreach Zone, Representative Soil Lead Concentration, and Category for Prioritization as shown below:

Icons in the upper right are links to functions on the map as illustrated below:
